

Inno4Life – your serialisation integration partner

Why integrate a serialisation system into the pharmaceutical supply chain?

The Inno4Life Serialisation equipment solutions are designed to simplify packaging processes. Our Serialisation equipment solutions are compatible with all high-tech production facilities and software processes known in the pharmaceutical packaging industry, and can be customised according to the unique requirements and specifications of every individual customer.

The world is facing a persistent and increasing threat from adulterated prescription drugs. Serialisation provides the opportunity to track and trace products from the smallest saleable unit throughout the complete supply chain, and from production site to patients who rely on medication for treatment of diseases.

Track & Trace / serialisation solutions.

From the smallest saleable unit to patients who rely on medication.

Serialisation includes the complete set of history data of products, from manufacturer to the end user. A unique serial number refers to specified information, e.g. product name, stock keeping unit, quantity, dosage, expiration date, lot and batch numbers, and might vary per region/country, complying with local regulations.

Expert advice on optimisation of utilities and equipment.

Confidence in decision making.

ISPE cGxP / Gamp® / Serialisation standards and programs vary between different countries and regions. The serialisation specialists at Inno4Life offer full support for the integration of the serialisation process in your supply chain. Inno4Life offers expertise and advice to help you integrate the process in your operational system according to your specified standards plus global and local regulations.

Is your facility ready for a serialisation process?

Benefit from a strong network.

Different local regulations demand for a local approach, flexible operational processes and compatible technical specifications. There is not a one size fits all solution that will serve the specific needs for each medicine, stock keeping unit or packaging line. The selection of the most suitable equipment supplier(s) for your serialisation process is important. Inno4Life has a strong network of reliable industry partners to integrate software, optical and printing components and specifications into your project scope.

I4L SU Serialisation units.

Independent of serialisation software platform.

The Inno4Life Serialisation equipment solutions are designed to simplify packaging processes. Our Serialisation equipment solutions are compatible with all high-tech production facilities and software processes known in the pharmaceutical packaging industry, and can be customised according to the unique requirements and specifications of every individual customer.

About Inno4Life

Your Equipment & Services partner

Inno4Life is an equipment manufacturer for the pharmaceutical industry, delivering serialisation, filling and lyophilisation loading & unloading equipment complemented with containment, stoppering and capping solutions, as well as appropriate customer service.

Our Customers include the top global pharmaceutical companies who appreciate extensive Pharma experience. Inno4Life is committed to deploy in-depth pharma knowledge to deliver market-leading innovative pharmaceutical packaging equipment solutions to help overcome the production challenges that our customers face.
